DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 10-06-2004 and 03-05-2007, the information disclosure statement has been considered by the examiner.

Allowable Subject Matter

3. Claims 1, 3-5, 7 and 10-13 are allowed.

Reasons for allowance

4. The following is an examiner's statement of reasons for allowance:

Regarding independent claims 1, 7 and 10, the prior art of Kawai (US 6,737,945 or US 2002/0050876) disclose digital broadcast receiving tuner having higher productivity as well as a less number of components than a conventional tuner because, on one surface of an insulating board, there is formed a first tuner while, on the other surface thereof, there is formed a second tuner, and therefore a single insulating board can be shared (see fig. 2, and abstract or page 1, par [0010-0011]). And

Kempisty (US 6,714,264), Hamaguchi (US 6,104,865), Sungihara (US 6249322) and Seo (US 5,929,944) discloses a digital television receiver with 2 tuners or more, that is receive and

decodes multiple programs, and signal transport decoder and a single video/audio decoder, which decoded multiple transport streams with the selection circuit and decodes multiple programs; and

Kawada (US 2003/0076049) disclose in the module for mounting the IC driver described above, the pad terminal 410 on the driver IC chip is connected, by wire bonding, to a connecting terminal connected to input signal and power supply line wiring patterns 440 formed in each layer of the printed circuit board 430 of multilayer wiring type. Further, the input unit of the module for mounting the driver IC described above has an input connector 461 (or 462). This input connector 461 is connected with an input terminal wiring pattern 445 formed in the upper layer of the printed circuit board 430 of multilayer wiring type on the one hand and with the input signal and power supply line wiring patterns 440 of other layers of the printed circuit board 430, through conduction through holes 446, on the other hand (see par [0030]).

The above prior art of record, however, fail to disclose or render obvious “A signal receiving apparatus comprising a plurality of signal receiving means including: input means for inputting a broadcast wave in which a video signal and/or an audio signal are modulated in a predetermined format; a circuit board having a circuit for selecting, from the broadcast wave, a video signal and/or an audio signal included in a predetermined frequency band and demodulating the selected signals, and a mount layer on which the circuit is mounted, a first ground layer arranged, on the surface opposite to the surface on which the circuit of the mount layer is mounted, with a predetermined distance from the mount layer through a dielectric layer, and a second ground layer arranged with a predetermined distance from the first ground layer through a dielectric layer, the circuit having a microstripline structure, wherein the signal receiving means are arranged such that the lowermost ground layer of one signal receiving

means and the circuit mounting surface of another signal receiving means face each other, and the signal receiving apparatus further comprising: decode means for decoding the video signal and/or audio signal that have been selected and demodulated, and output means for outputting the demodulated video signal and/or audio signal to an external device. And a first ground layer arranged on the opposite surface of the surface on which the circuit is mounted with a predetermined distance from the mount layer through a dielectric layer, and a second ground layer arranged with a predetermined distance from the first ground layer through a dielectric layer are sequentially stacked, and the circuit has a micro-stripline structure. And the first and second tuners has a double-sided printed board and predetermined components, the double-sided printed board having one surface serving as components mounting surface and other surface the whole area of which serves as a ground surface, wiring patterns of the mounting surfaces of the first and second tuners are configured to be substantially in plane-symmetry with the components mounted on the respective mounting surfaces also arranged in substantially in plane-symmetry, and the first and second tuners are arranged in the apparatus such that the ground surfaces of the respective double-sided printed boards face each other. On its format and layout means and its functions as specified in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
